

M&S or Shoot? [Carbine]

Pg. 1 of 2

Designed By: Jim Linch - www.oregonshooter.com

Drill :

The purpose is to test on the clock what you loose or gain shooting (3) targets on the move verses posting up.

String #1:

Start with carbine at low ready in Box A. On timer signal advance to Box B and fire (2) rounds COM to T1 then T1 & T3 while moving to Box C.

String time = overall time - time to first shot (fired at Box B)

String #2:

Start with carbine at low ready in Box A. On timer signal advance to Box B, post up and fire (2) rounds COM to T1 then T1 & T3 from Box B.

String time = overall time - time to first shot (fired at Box B)

Notes:

Only A-hits count!!!

Repeat test until you get clean runs of both strings and compare your times.

The point is to neutralize the (3) targets with as little exposure time to their incoming rounds.
